SUITE
M 14
“Bunsen, Angstrom, Fahrenheit... They had an unusual compilation of strange instruments and unstable minds. And so a group of people became obsessed with burning things.”

“He did not succeed with his attempt to measure the speed of light. He determined, however, that it was very fast.”

“He measured the speed of sound by clapping his hands. But to do that, he had to invent a clock.”

“Before we go on, let me just mention that all of the stuff we’ve learned about Newton is totally wrong and has nothing to do with the universe as we know it.”

“This is such a huge discovery that he misses it.”

“Einstein laughed and laughed and laughed... and then he cried.”

“All you have to do is create a black hole, and it’s not that hard! Next time, I’ll show you how to do it.”

“It turns out, experimentally, that it’s hard to send a particle backward in time.”

“Maybe there’s only one electron in the universe, and it has a very complicated path.”

What to say when things go bad:
That’s when things get difficult.
That... would be a problem.
This is a fun feature.
People were really upset.
He was real perturbed.
It really bothered him.

Things to make your grad student do:
Watch $10^{20}$ atoms for a thousand years.
Jump through a naked singularity.
Go through a wormhole with a bowling ball, running really really fast.
Hold on to the end of a kite flown in a thunderstorm, to convert electrical energy to acoustic energy.

We love our suite!
- Where did all our furniture go?
- Spiders, centipedes, and other 2-inch bugs.
- Bathroom doors that don’t close.
- Random piece of wood in our room.
- BIG STICK!
